

HOMEWORK 0

The image shows a Windows command prompt window and a GitHub repository page. The command prompt shows the user running 'java -version' and 'javac -version' commands, which output the Java version and runtime environment details. The GitHub page shows the repository 'ltkavouras / mscs630kavouras' with a 'Quick setup' section for cloning the repository using HTTPS or SSH, and a section for creating a new repository on the command line with a series of git commands. There is also a section for pushing an existing repository and a section for importing code from another repository.

```
C:\> Select C:\WINDOWS\system32\cmd.exe

Quick setup — if you've done this kind of thing before

Set up in Desktop or **HTTPS** **SSH** `https://github.com/ltkavouras/mscs630kavouras.git`

Get started by [creating a new file](#) or [uploading an existing file](#). We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# mscs630kavouras" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/ltkavouras/mscs630kavouras.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/ltkavouras/mscs630kavouras.git
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
